VISITOR RANGE

KLIK

Polypropylene Shells offer a hard wearing and soil-proof surface for outdoor and heavy duty events. The seat shell colour can be selected independently from the back colour to create unique colourways. Muted uniform colours can be specified if contrast colour-blocking is not your taste. A drainage hole clears rain water on the seat.

Padded Textiles exudes warmth and coziness, as well lending some organic texture. With some clever shaping, the seat pad is plusher and thicker than its slim appearance suggests. Seat and back pads can be replaced and removed without special skills or tools (screws and velcro fastening)

Stacks Straight Up

KLIK READY LEGS

Unique to the Klik chair are its Klik-Ready legs which make chair linking a simple and swift process. Simply interlock the legs by nesting one leg on top of the other without the use of tools or extra brackets.

Overlapping legs appear as a single leg to reduce visual clutter and create neat aligned rows, perfect for halls and other large function areas.
